Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 28, 29 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hazra et al. (U.S. Pat. #: 5,787,154 as cited in the previous Office Action) in view of Tasaki et al. (U.S. Pat. #: 4,879,744).

Regarding claims 28, 29 and 31, Hazra et al. ("Hazra") teaches an apparatus, such as an universal authentication (AU) device, and a method for use in making a communication from a first communication device such as calling telephone terminal (i.e., caller telephone terminal such as payphone or his/her own telephone) to a second communication device such as authentication system including a network switch/PBX or a gatekeeper coupled to a communication network, as shown in figure 6 (col.8, lines 5-25). The AU device comprises a memory having recorded therein, a substantially unique identifying value for use in authenticating usage of the AU device (i.e., PIN for a limited number of times and a limited amount of time). The memory of AU device also has a preprogrammed custom ID message (i.e., sequence id of the AU device) for delivery to the second communication device (authentication system) upon authenticated usage of the apparatus; and provides a preprogrammed custom ID message for delivery to the second communication device upon authenticated usage of the

apparatus (i.e., the sequence id of the AU device imbedded in an encoded 16-digits output to be transmitted to the authentication system, col.7, lines 16-63).

It should be noticed that Hazra fails to clearly teach the respective telephone number to be stored in the memory at a time later than the manufacturing of a calling card as argued by Applicant in his remarks filed on 10/21/2002. However, Tasaki et al. ("Tasaki") teaches such features in col.1, line 48 – col.2, line 5 for a purpose of saving time and of providing convenience to calling card by automatic dialing the stored telephone number after the first use.

Therefore, it would have been obvious to one of ordinary skill in the art at time the invention was made to incorporate the use of such features, as taught by Tasaki above, in view of Hazra, in order to save time and to provide convenience when the calling card is in use.

3. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hazra et al. (U.S. Pat. #: 5,787,154) in view of Tasaki et al. (U.S. Pat. #: 4,879,744) as applied to claim 28 above, and further in view of Longo et al. (U.S. Pat. #: 5,912,956 also cited in the previous Office Action).

Regarding claim 27, Hazra and Tasaki, in combination, teaches all subject matters as claimed above, except for a feature of providing a plurality of preprogrammed custom ID messages on said apparatus. However, Longo et al. ("Longo") teaches an identification tag as shown in figure 3 comprising a plurality of preprogrammed custom ID messages for finder or caller to select (col.4, lines 1-44) for a purpose of reaching the respective destination terminal.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the feature of providing a plurality of preprogrammed custom

ID messages on said identification tag, as taught by Longo, in view of Hazra and Tasaki in order to improve on the manner of making calls for specific request service(s) from the AU device.

Response to Arguments

1. Applicant's cancellation with respect to claims 12-18 and 21-27 were noted. Applicant's argument with respect to new claims 28-31 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire **THREE MONTHS** from the date of this action. In the event a first response is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than **SIX MONTHS** from the date of this final action.
